

EXTRAORDINARY VISION

MADISON COUNTY CONSERVATION CENTER
CAPITAL CAMPAIGN

Educating Across Generations

A successful environmental education program must be comprehensive in its approach by reaching patrons of ALL ages. Although most programs tend to focus on youth, it is imperative that our programs intrigue and encourage the participation of all generations.

YOUTH CAMPS

These camps engage students from Preschool to age 12 by introducing them to age appropriate learning models that make it fun to be outdoors — that it's OK to get your feet wet or sneak a snail home in your pocket!.

IN-SCHOOL PROGRAMMING

Visiting schools allows our naturalists to lay ground work with large groups of students and eventually bring them to natural "outdoor classrooms" for hands-on programming.

TEEN CONSERVATION CLUBS

Clubs encourage teen students to take a more active role as environmental stewards in their community, often assisting with the development of programming or designing of facilities.

FAMILY OUTING

Outings teach young parents that just because they are busy raising kids, doesn't mean they put their love for outdoor adventure on hold. Young people should act young and bring their kids along for the ride.

ADVENTURE PROGRAMMING

Signing up for an adventure challenges people of all ages to finally do those "outdoor things" they just never got around to doing — backpacking, canoeing, kayaking, overnight camping, snow-shoeing... whatever!

SEMINARS

We offer programs that provide an opportunity to discuss the environmental issues important to our communities.

CITIZEN SCIENTISTS

An opportunity for passionate "volunteers" to lead public programs on topics ranging from Birding to Astronomy.

SENIOR ADULT PROGRAMMING

These programs are aimed at keeping senior citizens active, physically and socially, in their community knowing they provide respected insights into the historical values of environmental stewardship.

“Our environmental education program strives to connect the community with our natural resources through observation, investigation, and exploration. The Conservation Center will serve as the home base in providing an exhilarating place where people of all ages can gather together to learn about our unique resources and the importance of land stewardship.”

— Amy Holley, Outdoor Education Coordinator
Madison County Conservation Board
